

Guardian ERM

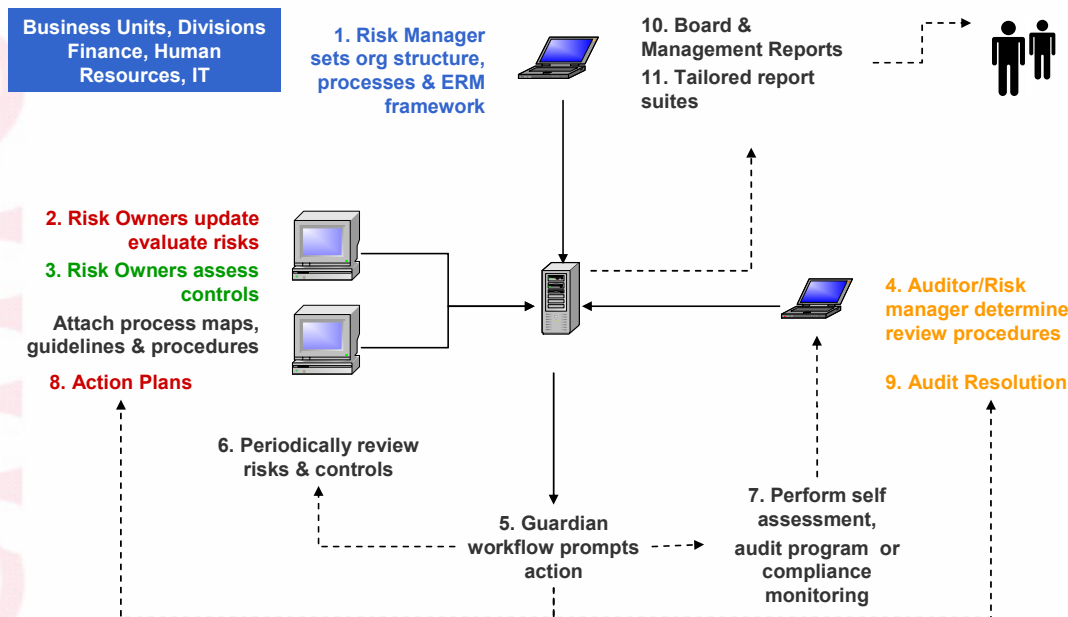

Integrated Enterprise Risk Management

What is Guardian ERM?

Guardian ERM is the next generation risk management system. It leads the field as a completely integrated single platform that brings together all key elements of risk management, compliance monitoring, internal audit and incident management into one easy to use yet powerful system.

Underlying Guardian ERM is the philosophy that several people/departments in an organisation play a role in active risk management. It could be argued all employees do. As a fully integrated system, it brings together key risk management activities and enhances the entire process workflow to help you focus on genuine risk management rather than risk administration.

- The Risk Manager determines the risk structure within Guardian ERM. This structure is flexible to meet the needs of complex and global organisations in any industry.
- Risk Owners identify, analyse and evaluate their risks and controls (including the risk likelihood and impact). Guardian ERM's powerful risk analysis capabilities can help you conform to Australian and New Zealand risk management standard AS/NZS4360, COSO's ERM framework, APRA, PHIAC, Sarbanes-Oxley or any other framework you require. Key documents including process maps, policy manuals and authorities can be attached.
- Auditors determine audit procedures for each control. Every audit program is prepared in Guardian ERM and all audits are performed in Guardian ERM using electronic work papers.
- Incidents and accidents can be recorded and assigned to specific risks and controls.

Want to know more?

Guardian ERM is designed, developed and supported by InConsult and is suitable for small, medium and large enterprises. To see Guardian ERM's full capabilities, contact InConsult on 02 9241 1344 or email us at info@inconsult.com.au to arrange a demonstration.
