

The Need For Business Continuity Planning

The most important reason for business continuity planning is to ensure you can continue through, and recover from, an interruption that could threaten your survival.

That's why, your Business Continuity Plan (BCP) is an important management tool designed to increase your resilience to a range of plausible disruption scenarios from internal or external risks.

What are your key business activities and how long could you survive in the event of a disruption to them?

Our Unique Approach

Combining our experience with key principles from AS/NZS 436 and HB 221, InConsult has developed an integrated risk based approach to business continuity planning.

Our approach is suitable for small, medium and large organisations looking for a simple, effective and efficient business continuity planning process.

Working together, we will ensure your BCP:

- Is developed in the **context of your organisation** and business environment
- Covers your **entire business** and not just information systems
- Incorporates **crisis management and disaster recovery** into the one BCP
- Identifies all **realistic hazards** and the key business continuity risks
- Assesses the **impact of key risk** on critical processes
- Recognises your **key business processes** and their dependencies
- Documents **maximum acceptable outage** (MAO) for key processes
- Identifies **controls** that reduce continuity risks
- Contains appropriate **continuity and recovery** strategies
- Includes an **ongoing monitoring plan** to test controls for continuity and recovery processes

How We Can Help You

InConsult understand the importance of business continuity planning. We help you:

- Evaluate the effectiveness of your current BCP/DRP and identify opportunities for improvement.
- For APRA authorised insurers, assess the level of compliance to GPS222 and GGN222.1 and help you fill the gaps.
- Develop a complete BCP and DRP appropriate to your organisation.
